

# Dashboard Building Process

## 1. Analyze

- Understand the business requirements and define the main analytical goals.
- Choose the right charts (BANs, line charts, bar charts, table).
- Plan the required comparisons, trends, and filters.
- Choose colors( grey #CECECE, black #303030, orange #FF5500, blue #1DA2D0)

## 2. Build the Data Source

- Connect and review the required datasets in Tableau.
- Check data types, relationships, and data quality.
- Create calculated fields for KPIs, year-over-year comparisons, averages, and rankings.
- Prepare the final data structure for visualization.

## 3. Build the Charts

### Sales Dashboard

- Create KPI cards for Sales, Profit, and Quantity.
- Build monthly and weekly performance charts.
- Compare current and previous year results.
- Analyze Sales and Profit by Subcategory.

### Customer Dashboard

- Create KPI cards for Customers, Sales per Customer, and Orders.
- Visualize customer order distribution.
- Build a Top 10 Customers by Profit table.

## 4. Build the Dashboards

- Arrange the charts into the Sales and Customer dashboards.

- Add filters for **Year, Category, Sub-Category, Region, State, and City**.
- Add navigation between dashboards.
- Apply consistent formatting and interactive actions.
- Test all calculations, filters, and interactions before finalizing.
